abstract:

In the framework of the PNRR-funded project Age-It (A novel public-private alliance to generate socioeconomic, biomedical and technological solutions for an inclusive Italian ageing society), WP6 (Silver economy and social capital), task 3, the research activities will contribute to the analysis of the state-of-the-art, potential, enabling and hindering factors and possible consequences of the use of technologies in care practices with and for older people in the Italian context from a comparative perspective.

The research will consist of:

Systematic international literature review in the social-scientific domain concerning (1) social, political, cultural, technological and economic factors enhancing and limiting the use of technologies in care practices; (2) the effects on the wellbeing of individuals and social groups providing and receiving care, with specific reference to care and mobility devices, care platforms, telemedicine and telecare

Systematic review of databases (surveys and institutional data) relevant for the study of the use of above-mentioned technologies and (descriptive) analysis of the data.

Case study research through collection and analysis of data, documents, interviews and focus groups
