abstract:

The study intends to relate longevity with socio-economic conditions at the individual level. However information available in survey data, such as Share, are not accurate enough, which is why it is necessary to refer to register data. The Share data in Denmark has already been linked with administrative data through a record linkage, so that it would be possible to reconstruct in this case the quality of the Share data. The candidate should be able to acquire the necessary knowledge to reconstruct longevity data.
