

Biological and cultural diversity in the context of European vulnerable ecosystems

This two-day international workshop aims to discuss different aspects of the human-nature interaction in the context of European vulnerable ecosystems. Particularly, it would address the crucial importance of biological and cultural diversity for the sustainability and resilience of our European wetlands and mountain areas in several countries of Western and Eastern Europe.

Several scholars will present their current researches and together we will discuss the importance of a holistic perspective in ecosystem management. Indeed, we will bring together knowledge from different disciplines including environmental sciences, biology, anthropology, and ecology.

Scholars at any stage of their careers and graduate students are welcome to join this workshop to discuss together the importance of a holistic perspective in managing fragile ecosystems across Europe. We will exchange experiences and know-how, and virtually visit some hidden natural pearls of the Venice Lagoon and the Dolomiti Bellunesi National Park with their heads of research.

In collaboration with:

OASI

Two-day online workshop on Zoom April 28th and 29th 2021 9:30 – 17:30

INFO & BOOKING

We invite interested scholars to participate by submitting an abstract concerning vulnerability and management of bioculturally diverse mountain regions and wetlands in Europe.

Please send abstracts of max 300 words to **giulia.mattalia@unive.it** by **March 28th 2021**.

Scholars and students are very welcome to join by registering [here](#) by April 23rd 2021.

Scientific organizing committee:

Olga Belichenko, Marco Calvi, Virginia Cazzagon, Mirko Liuzzo, Giulia Mattalia, Arianna Spada

The workshop event is co-founded by the Institut Français and the Ca' Foscari University of Venice – Dept. of Environmental Sciences, Informatics and Statistics under the Bando Cassini agreement
